Industry Summary

- With five years of steady growth, industry revenue is expected to reach \$5.2 billion in 2017-18 at an annualised growth rate of 2.5%.
- The industry benefits from global economic uncertainty as consumers refrain from purchasing new cars and require parts to maintain their cars. The industry is expected to continue its profitability in the current year, with revenue anticipated to increase by 2.2%.
- Growth in disposable income has driven retail demand for automotive parts and discretionary accessories over the past five years as consumers have the option to choose between buying new or used motor vehicle parts.
- Demand has also increased due to the increasing number and variety of Australian registered vehicles and the specialised nature of automotive products limits competition.
- Ongoing growth in household disposable income is expected to continue and industry revenue is forecast to grow by an annualised 1.9% over the five years through 2022-23, to reach \$5.7 billion.
- The industry will benefit from providing consumers the choice of new, recycled and reconditioned parts.
